

## Design and applications

Measuring units RA 77 and FA 77 are based on the variable area float principle. The flow meter consists of a PVC armature with a measuring cone made of borosilicate glass. With these design features the RA 77 / FA 77 devices combine the advantages of the classical VA flow meters with those of pure plastic measuring devices: Cost-effective, resistant against almost all aggressive media, as well as a high accuracy of the measuring glass, which can be calibrated to suit any requirement. Especially with water and aggressive media this design has proven itself. Therefore the RA 77 / FA 77 are frequently used in the chemical industry and in water treatment plants.

By installation of electrical limit value switches, which are adjustable throughout the entire measuring range, these devices can be used as detectors.

Our technical documents provide a detailed explanation of the function and measuring principle of VA flow meters.

RA 77 / FA 77

- **calibrated borosilicate measuring cone**
- **armature made of plastic**
- **perspex half-shell as shatter protection**
- **reliable due to simple mode of operation**
- **resistant against aggressive media**
- **cost-effective**
- **scales specific for the media to be measured**
- **optionally limit value switches**

# RA 77 / FA 77

## Schwebekörperdurchflussmessgeräte

### Type series

RA 77	with thread connection / gluing sleeve
FA 77	with flange connection
RA / FA 77-MSK1	with switching switch (normally open)
RA / FA 77-MSK12	with switching switch (normally closed)
RA / FA 77-MSKW	with switching switch (change over)

### Technical Data

Nominal pressure rating and temperature resistance of the armature	PN 10 at 0 to +20 °C PVC: max. 6 bar at 40 °C PP: max. 1,5 bar at 80 °C PVDF: max. 5,5 bar at 80 °C
Max. operating pressure	see table of measuring ranges on page 3
Measuring range	1:10
Accuracy class	VDE/VDI 3513 page 2 (08/2008)
Error limit (G)	1,6 %
Linear limit (qG)	50 %
Connection RA77	union nut and gluing sleeve acc. to DIN 8063, optionally thread acc. to DIN EN ISO 228 T1
Connection FA77	flange PN 10 acc. to DIN EN 1092-1, others on request

### Materials

Protective tube	PVC-CAW-tube with insp. window, dark grey
Fittings and inserts RA 77	standard: PVC optionally: PP, PVDF
Flanges FA 77	standard: PVC optionally: PP, UP-GF
Measuring glass	borosilicate glass
Splinter shield	perspex
Gaskets	standard: EPDM optionally: FKM
Floats for liquids <sup>1)</sup>	standard: PVC red optionally: 1.4571, PP, PVDF
Floats for gases <sup>1)</sup>	standard: PVC red optionally: Aluminium anodized, PP, PVDF
With limit value switch	PVC red with magnetic core

other materials on request

<sup>1)</sup> Floats at small sizes unguided, from size 30 partly with guide rod.  
We will send you a detailed table on request.

### Limit value switches MSK1/MSK12/MSKW

In order to realize a local display with a monitoring function the flowmeter can be equipped with limit value switches. The limit value switch consists of a connector housing and a bistable reed switch. A magnet integrated in the float switches this reed switch. The limit value switch is guided in a guide slot on the back of the protective tube and can be adjusted throughout the entire measuring range. In case of inductive or capacitive load applications, e.g. caused by contactors or solenoid valves, uncontrolled current and voltage peaks may occur. In dependence on their geometry such peaks also occur in lines if they exceed a certain length. It is therefore recommended to use an additionally available arc suppression relay "MSR". This increases the switching capacity and avoids the appearance of inductive and capacitive peaks. It thereby ensures a long lifetime of the contact.

### Technical data of the limit value switches

Design	MSK1	MSK12
Switching voltage	50 V AC/75 V DC	50 V AC/75 V DC
Switching current	max. 0,5 A	max. 0,5 A
Switching capacity	max. 10 W/VA	max. 10 W/VA
Dielectric strength	230 V AC/400 V DC	230 V AC/400 V DC
Temperature range <sup>1)</sup>	-20 ... +90 °C	-20 ... +90 °C
Switching function	normally closed, bistable	normally open, bistable
Connection		
Design	MSKW	MSKW short
Switching voltage	50 V AC/75 V DC	100 V DC
Switching current	max. 0,5 A	max. 0,5 A
Switching capacity	max. 5 W/ VA	max. 5 W/ VA
Dielectric strength	110 V AC/200 V DC	200 V DC
Temperature range <sup>1)</sup>	-20 ... +90 °C	-20 ... +90 °C
Switching function	change over, bistable	change over, bistable
Connection		

<sup>1)</sup> Please note the temperature resistance of the flow meter.

### Low Voltage Directive

Above 50 V AC/75 V DC, electrical components are subjected to the EU Low Voltage Directive (LVD). The user is required to verify their use accordingly.

### Proper use

The user is responsible for assessing the suitability of the flow meters for his case of application, for use as prescribed and for material compatibility regarding the fluid product used in his process.

The manufacturer shall not be liable for any damage arising from incorrect or improper use of the devices.

Pressure surges can cause glass breakage and should therefore generally be avoided. The limit values given in the data sheet should be observed.

In all other respects we advise following the installation recommendations specified in Code VDI/VDE 3513, Sheet 3.

The equipment from **Kirchner und Tochter** has been tested in compliance with applicable CE-regulations of the European Community. The respective declaration of conformity is available on request. Subject to change without notice. The current valid version of our documents can be found at [www.kt-flow.de](http://www.kt-flow.de).

The **Kirchner und Tochter** QM-System is certified in accordance with DIN EN ISO 9001:2015. The quality is systematically adapted to the continuously increasing demands.
